

“ Delivering the results you need first time, every time. ”

## PIPELINE TESTING SERVICES

*With a history of successfully delivering hundreds of pipeline projects throughout Australasia, APTS Engineers have the necessary experience to provide your pipeline testing solutions.*

*APTS pipeline testing services are NATA accredited for your project confidence.*

APTS' expert personnel and in-house team of experienced engineers are able to assist with all technical aspects and planning of pipeline tests. Our team can design and procure headers to suit your testing requirements.

APTS has a fleet of high flow filling pumps and pressurisation pumps located across Australia, catering for a variety of pipelines. Complemented with NATA calibrated testing instrumentation, APTS provides accuracy that is capable of monitoring the most sensitive buried pipelines.

Buried pipelines require extensive analysis of on-site data. APTS has highly accurate continuous data logging systems to assist in differentiating between temperature fluctuations and potential leaks. Our on-site engineers and pipeline personnel are trained to the requirements of AS 2885.5 at the APTS specialised pipeline training facility in Henderson, Western Australia.

APTS provides testing solutions for in-service pipelines such as airport fuel pipelines and jetty fuel pipelines that require re-certification at regular intervals. To reduce 'down time' we can perform these tests using existing diesel, avgas, jet fuel or other liquid hydrocarbons, in line with standard AS 2885.5.

### *Supporting Services APTS Provide:*

- Cleaning and Air Blowing
- Nitrogen Purging
- Pigging and Gauging
- Header Design and Procurement
- Desiccant Drying
- Decommissioning of Obsolete Pipelines

Contact APTS today on 08 9412 1500 to find out more about our Pipeline Testing Services.
